

USST PRESS RELEASE

Formed in 2005, The University of Saskatchewan Space Design Team (USST) is a student and alumni group on campus that's dedicated to the development of next generation space technologies.

MARCH 1, 2012: University of Saskatchewan Space Design Team returns from Canadian Space Agency with exciting news

The USST has recently returned from Ottawa after attending the critical design review for the Canadian Satellite Design Challenge. It was at this review that the team presented the design of their nanosatellite to a panel of judges. The USST has received the results from this exciting venture and are eager to share them with the public. For media outlets who attended the USST's recent press conference, this will provide for excellent follow-up coverage. For others, this will serve as a great opportunity to become acquainted with the team and establish future media relations.

The USST is currently in the process of designing, building and launching Saskatchewan's first nanosatellite into space. As announced at our recent press conference, we have received confirmation from the **UNITED STATES NAVAL RESEARCH LABORATORY** for collaboration on this endeavour. For more information about the team, visit usst.ca.

TO ARRANGE FOR AN INTERVIEW

Please contact Jana Mujkic at public.relations@usst.ca.

We will begin conducting interviews on Monday, March 5.
